HOW TO MOUNT PRO POWER VERSION 2 IN PEDALTRAIN BOARDS

Place the ProPower Version 2 upside/down in the brackets under the Pedaltrain as intended, and hold it in place with two straps instead of screw it to the brackets.
SEE PIC.

The bonus is you now can get to the DC out's very easy, while the mains power cord is inside under the board good and safe, the mains and voltage switches is also inside the board.
Elegant, neat and very sturdy.
